

Patient Name :	Gender : Female
Age : 38 Y	Date : Jun 01, 2024
Referring Doctor :	Patient ID :

MAMMOGRAM

FINDINGS:

Both breasts show bilateral fibroglandular tissue is present. (ACR - B)

There is a radio opacity seen in the lateral aspect of the right breast with ill-defined contour approx measuring 4 x 3.5 cm with no evidence of any calcification seen - likely BI-RADS VI.

Left breast appears to be normal with no evidence of any lesion seen.

There is an enlarged right axillary lymph node

No evidence of any calcification seen in bilateral breast.

Bilateral ducts are not prominent.

No evidence of any left axillary lymphadenopathy present.

IMPRESSION:

- **There is an enlarged right axillary lymph node.**
- **There is a radio opacity seen in the lateral aspect of the right breast with ill-defined contour approx measuring 4 x 3.5 cm with no evidence of any calcification seen - likely BI-RADS VI.**
